

## A case of mistaken identity

The first *Triceratops* fossils were a pair of giant horns found near Denver in 1887. However, they were mistakenly identified by paleontologist O.C. Marsh as belonging to a giant, extinct bison (a cousin to CU's mascot Ralphie). As more fossils were discovered, Marsh realized his mistake. We now know those original giant horns belonged to *Triceratops*!

This cast (or replica) is based on bones from 10 different specimens of *Triceratops horridus*, collected in Wyoming in the early 1890s. This composite was exhibited as a single skeleton in 1905 in Washington D.C. You are looking at a replica of the first mounted *Triceratops* in the world.

### A case of mistaken identity

### Un caso de identidad equivocada

Las primeras fósiles de *Triceratops* fueron de cuernos gigantes encontrados cerca Denver en 1887. Sin embargo, fueron identificados erróneamente por paleontólogo O.C. Marsh como pertenencia a un gigante; bisonte extinto (un primo de la mascota de CU's Ralphie). A medida que se descubrieron más fósiles; Marsh se dio cuenta de su error; Ahora sabemos que los cuernos gigantes originales perteneció a *Triceratops*!

Este molde (o réplica) se basa en huesos de 10 especímenes diferentes de *Triceratops horridus*; recogido en Wyoming a principios de la década de 1890. compuesto fue exhibido como un solo esqueleto en 1905 en Washington D.C. Estás viendo una réplica de la primera *Triceratops* montada en el mundo.
